The videos you are about to watch is not real

Prompt: A stylish woman walks down a Tokyo street filled with warm glowing neon and animated city signage. She wears a black leather jacket, a long red dress, and black boots, and carries a black purse. She wears sunglasses and red lipstick. She walks confidently and casually. The street is damp and reflective, creating a mirror effect of the colorful lights. Many pedestrians walk about.

Prompt: The camera directly faces colorful buildings in Burano Italy. An adorable dalmation looks through a window on a building on the ground floor. Many people are walking and cycling along the canal streets in front of the buildings.

Prompt: The camera follows behind a white vintage SUV with a black roof rack as it speeds up a steep dirt road surrounded by pine trees on a steep mountain slope, dust kicks up from it’ s tires, the sunlight shines on the SUV as it speeds along the dirt road, casting a warm glow over the scene. The dirt road curves gently into the distance, with no other cars or vehicles in sight. The trees on either side of the road are redwoods, with patches of greenery scattered throughout. The car is seen from the rear following the curve with ease, making it seem as if it is on a rugged drive through the rugged terrain. The dirt road itself is surrounded by steep hills and mountains, with a clear blue sky above with wispy clouds.

Everyone can make song using AI

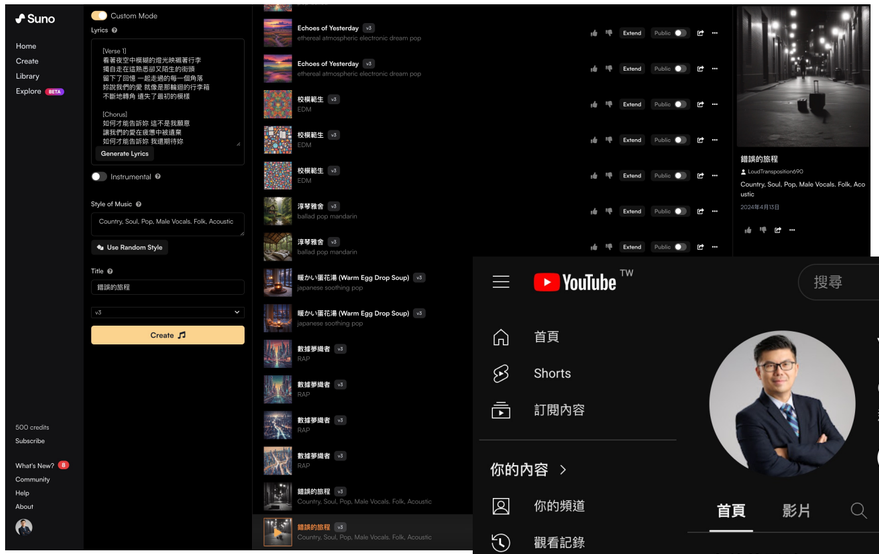

To make lyrics using ChatGPT

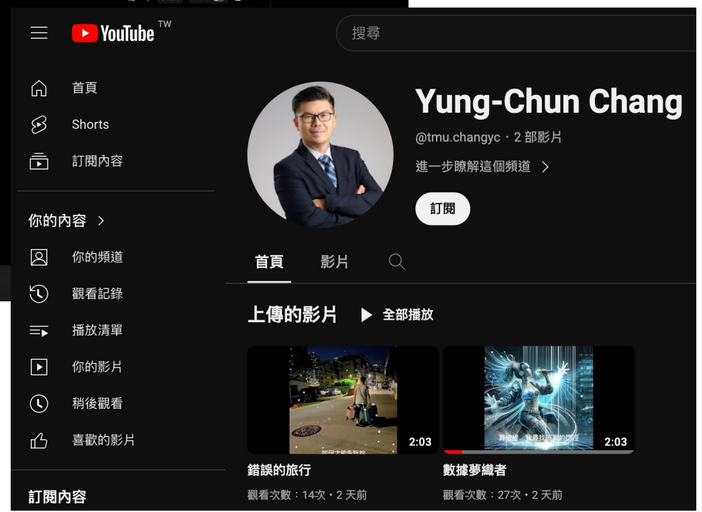

你

我是臺北醫學大學大數據研究所的教授，我的專長是自然語言處理與醫療人工智慧，我想要創作一首RAP歌曲，這是一首有關人工智慧的歌曲，歌曲中闡述我發憤圖強、努力向上學習最新的技術，請幫我產生這首歌的歌詞

ChatGPT

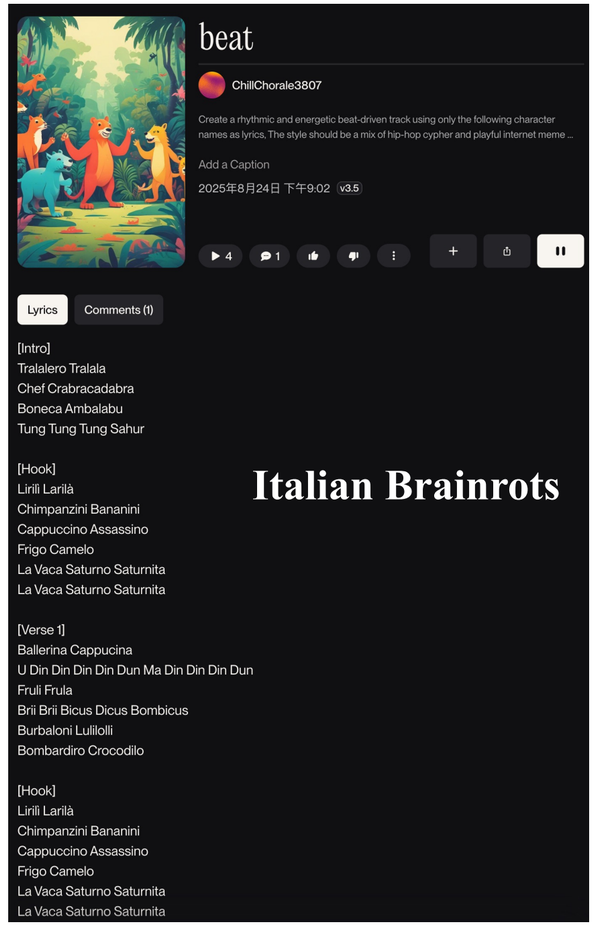

當然可以！這裡是一首關於人工智能的RAP歌詞，希望能激發您的靈感：

To generate a song using Suno

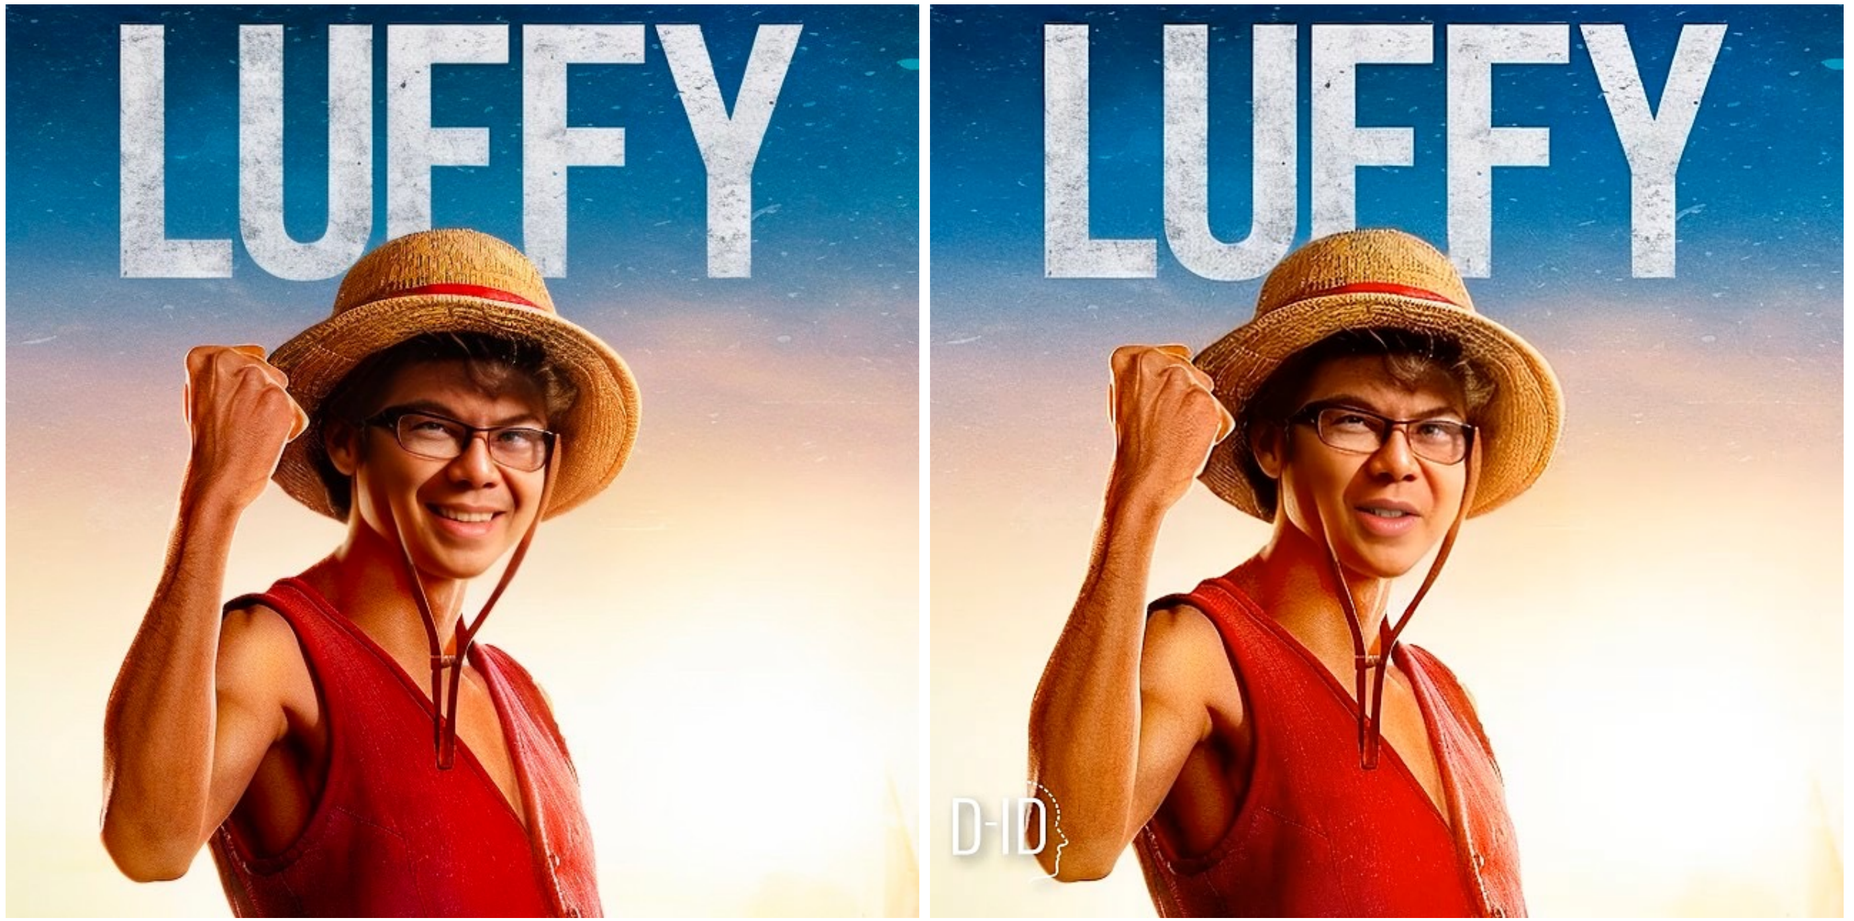

AI can change the singer of a song

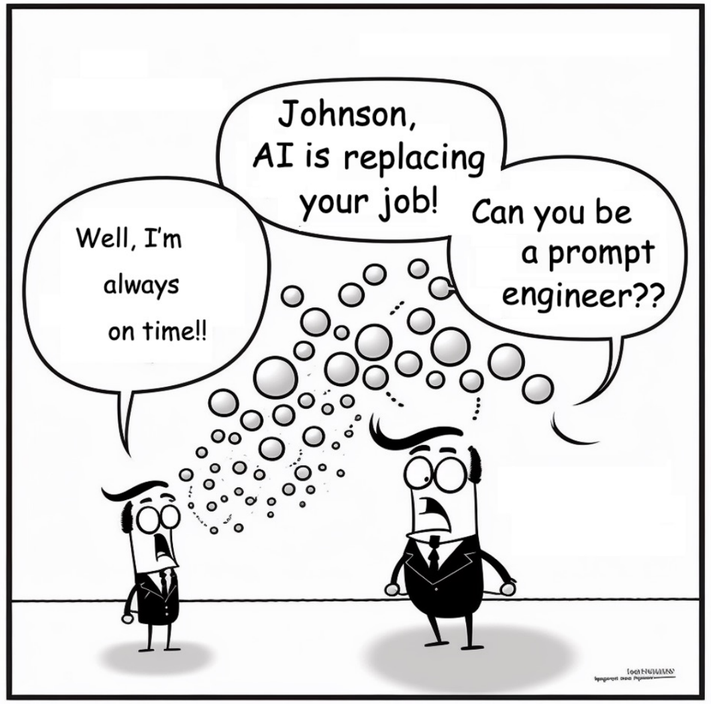

Image Generation + Text Generation + Voice Generation

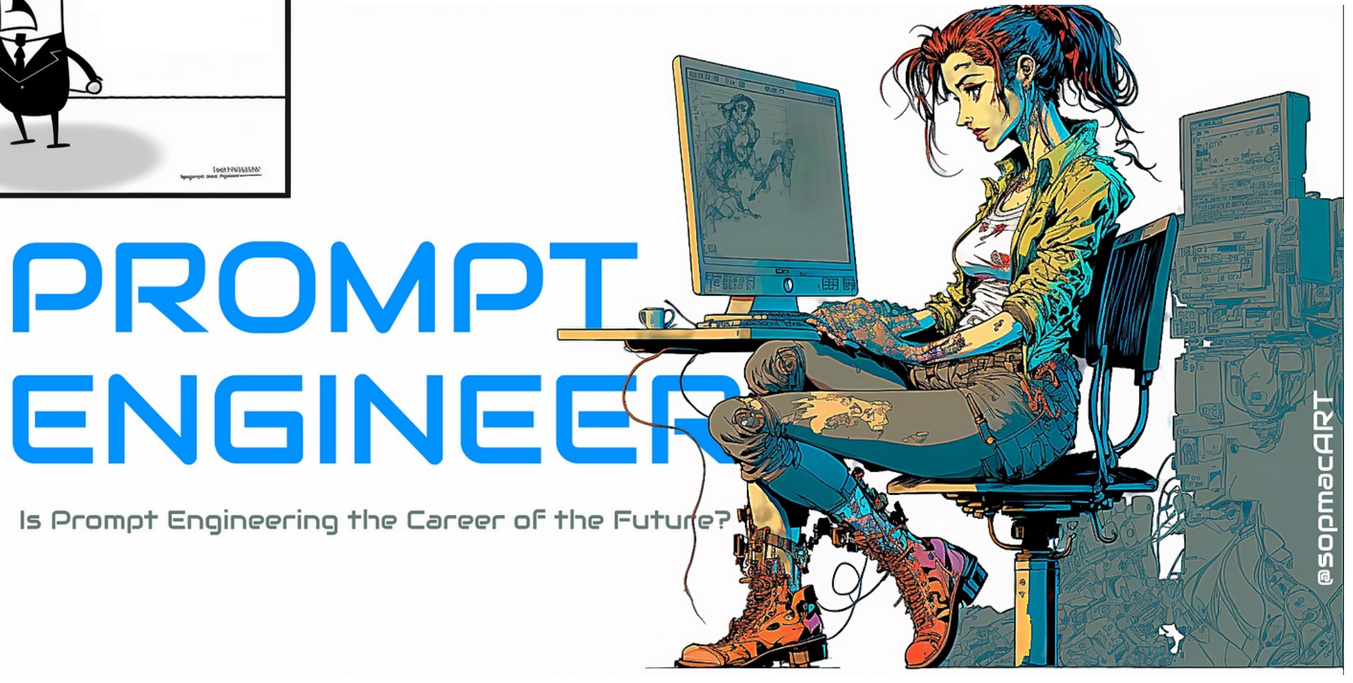

Ongoing trends

Prompt Engineer

Tips to create effective prompts:
- Talk to AI like you would talk to a person
- Set the stage and provide context

LLM Hallucination

- When used to generate text, language models are designed to make things up. That's all they do. But since they only ever make things up, when the text they have extruded happens to be interpretable as something we deem correct, that is by chance.
- There's a balance between creativity and perfect accuracy, and the model will need to learn when you want one or the other.
- "***Hallucinations are actually an added bonus***"….maybe ^^

Outsourcing our brain to technology
